

Wedding Day Flags Artwork Specifications

Screen Printing

For screen printing, we require vector artwork created in "Adobe Illustrator" or "Corel Draw", or saved as a generic EPS (no scanned images, please see below). Please convert all fonts to outlines/curves, and indicate Pantone equivalents for any colors that require accurate color matching.

Please note that JPG, TIF, BMP, PSD, GIF and any scanned or website images must be re-built in order to create the screen (art charges will apply).

Digital Printing

We accept artwork saved in "Photoshop CS2", "Illustrator CS2", "Corel Draw 12" and "Quark Express 6" or any earlier versions of these. Generic formats such as "EPS", "TIFF", "PDF", and "JPG" files are also acceptable as long as they meet the criteria below.

Please provide artwork in a PC or MAC compatible format and convert all fonts to outlines/curves, except for "Quark Express" where fonts will have to be supplied.

Please provide any raster images such as photos at as high a resolution as possible (75-100 DPI at actual size is very good, above 50 DPI is strongly recommended).

Please indicate Pantone equivalents for any colors that require accurate color matching. Please provide all other colors in CMYK. Note that color proofs are required in order to ensure accurate color matching (see address below).

If your artwork contains photographic images a color proof is very important to a successful outcome.

Artwork under 7 MB can be emailed.

Artwork under 500 MB can be uploaded onto our FTP site (please contact Anne for login information), or sent to us on CD/DVD (preferable for complex artwork).

Artwork over 500 MB should be sent on CD / DVD.
